

Spatial organization of the immune programs in H3.3 K27M pediatric diffuse midline glioma (GSE268577)

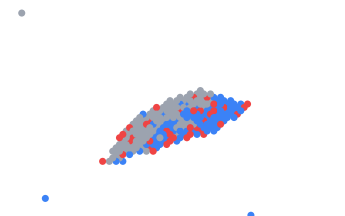

A pDMG Sample-1 577 spots
same-neighbor 0.540 vs null 0.358, $P = 0.001$

B pDMG Sample-2 856 spots
same-neighbor 0.357 vs null 0.338, $P = 0.019$

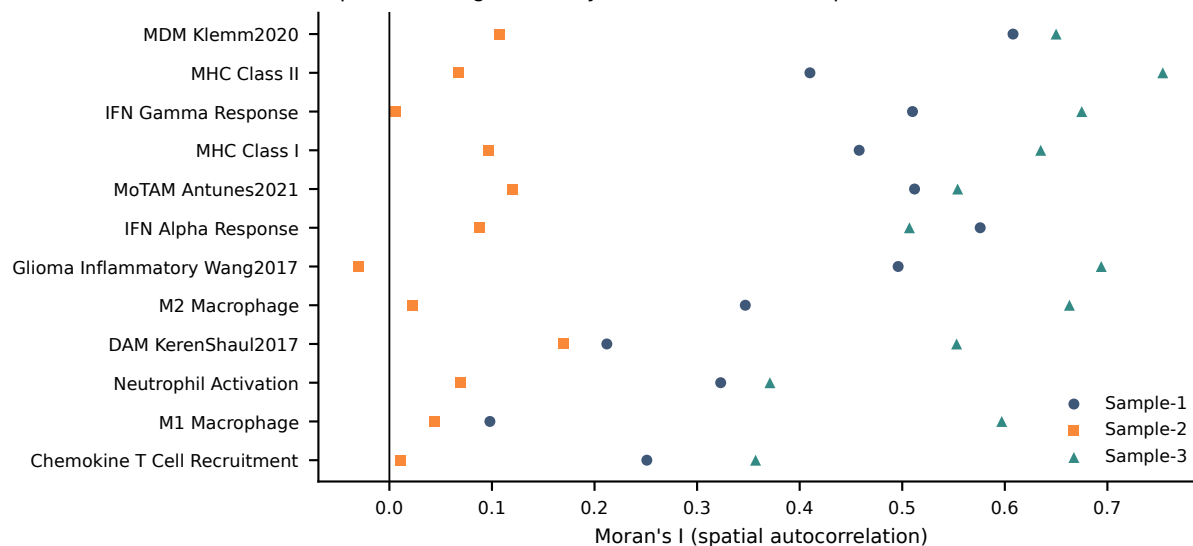

C pDMG Sample-3 217 spots
same-neighbor 0.562 vs null 0.370, $P = 0.001$

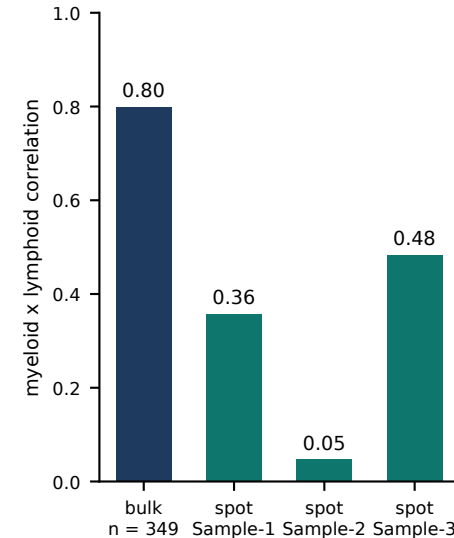

nearest bulk ecotype centroid

- Lymphocyte-inflamed
- Myeloid-dominant
- Immune-desert

D Immune programs are spatially structured, not randomly distributed
top 12 of 24 signatures by mean Moran's I; 999-permutation test

E Myeloid-lymphoid coupling is weaker within tissue than across bulk tumors

F Spots mapping most closely to each of the three bulk ecotype centroids were represented within each section
