

Single-cell support for the cellular interpretation of the immune signatures and ecotypes

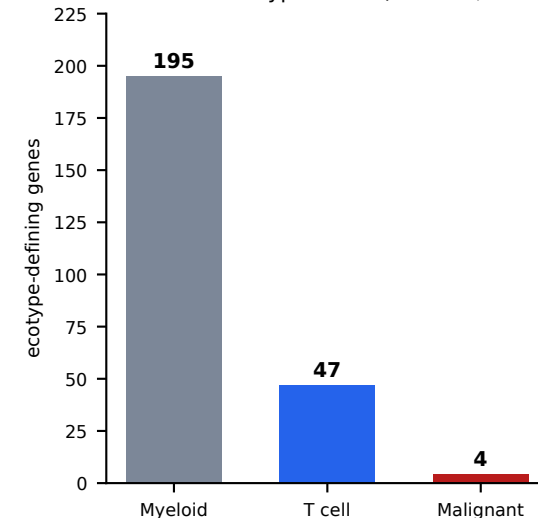

A Signature score by annotated cell type
18,619 immune cells, 4 pHGG samples (GSE227983)

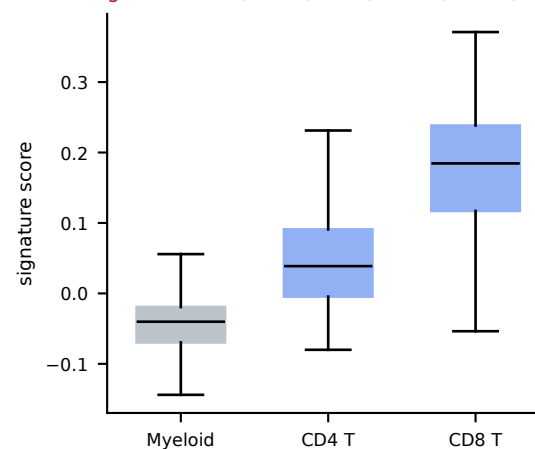

B Does each signature identify the cell type it is named for?
bars, all cells; whiskers, per-sample range

D Which cell type expresses the genes that define the ecotype axis? (n = 246, Smart-seq2)

C Glioma_Inflammatory_Wang2017
genes: GZMB, PRF1, IFNG, GZMA, NKXG7, CD8A, CD8B, CCL5

E Permutation P = 0.005
