
A
Immune-high vs Immune-low
Reference: Immune-low; up 3,718; down 228
− log10(BH q)
Adjusted log2 fold change
B
Immune-intermediate vs Immune-low
Reference: Immune-low; up 431; down 69
− log10(BH q)
Adjusted log2 fold change
C
Immune-high vs Immune-intermediate
Reference: Immune-intermediate; up 808; down 117
− log10(BH q)
Adjusted log2 fold change
D
Overlap of up-regulated genes
404/431 (93.7%) of the Immune-intermediate set is contained in the Immune-high set
Immune-high vs Immune-low
404
3,314 unique
total 3,718
27 unique
Immune-intermediate vs Immune-low
404
total 431
Up-regulated genes (BH q < 0.05; adjusted log2FC > 1)
E
Adjusted effect sizes across contrasts
All 18,564 genes; Pearson r = 0.78
Adjusted log2FC: high vs low
Adjusted log2FC: intermediate vs low
Identity (y = x)
orthogonal fit (slope = 1.90)
F
Shared-gene effect sizes
Paired Wilcoxon signed-rank P = 1.6 × 10−65
Adjusted log2FC (404 shared genes)
Immune-intermediate vs Immune-low
Immune-high vs Immune-low
